Key:

- A Solar module
- B Solar charge controller
- C Battery
- D Steca Solarix PI sine wave inverter
- E Steca PAX4 parallel switch box
- F Generator junction box
- G Electrical load (230 V)

The simple expandability of the Steca Solarix PI inverters pays off. Up to four devices can be operated in parallel. The connections are made via an external box, the Steca PAX4. From the outside, the combination of two, three or four inverters functions like one device with a correspondingly higher capacity. Internally, in case of open-circuit operation or low output, e.g. for the lighting, only one inverter continues to operate.
